

**The Eurolife
Distinguished Faculty Lecture Series
Presents:**

**„Multiscale chromatin
reorganization in the context of
ageing “**

by

Argyris Papantonis, PhD
Professor for Translational Epigenetics
Institute of Pathology
University Medical Center Göttingen

**Dec 3rd at 5:00 pm
at Innsbruck Medical University
Lecture Hall Pharmacology
Peter-Mayr-Straße 1a, Innsbruck**

BRIEF BIOGRAPHY

Argyris Papantonis (b. Athens, 1978) studied Biology at the University of Athens, where he also undertook his PhD studies on insect transcriptional regulation. He did his postdoctoral work at the Sir William Dunn School of Pathology, University of Oxford, with Peter Cook, where he also served as a Lecturer of Biochemistry at University College. In 2013 he was appointed as a Junior Research Group Leader at the Center of Molecular Medicine of the University of Cologne, and since 2018 he has been a Professor for Translational Epigenetics at the Medical Faculty of the University of Göttingen. The main focus of his laboratory is deciphering the connection between the structure and the function of human chromosomes using genomics and functional assays, mostly in the context of cellular ageing and inflammation.
